Roberti®
OUTDOOR PLEASURE

MARINE COLLECTION

It's a matter of style!

A good taste and innate creative spirit can drive to a unique style. Roberti selection of outdoor furniture for the "marine" locations is the fruit of a research of beauty: matching materials, shapes, colours, ideas finally becoming a unique on its kind!

It's also a matter of experience!

A confirmed experience can provide the best union harmony between style and functionality, to guarantee a product with the highest resistance even in the most exceptional conditions as in example on a ship's deck. Roberti long experience in the production of outdoor furniture for "marine" destinations has proved the high grade resistance of the various materials used like aluminum powder coated, sea and nautic ropes, suitable polyethylene weaves and the very special "outdoor cushions and upholstery" system.This collection of models among the different Roberti lines is a carrier for easy prompt reference and in the same time a warranty of quality.

Roberti®

CONTEMPORARY ELEGANCE WITH HIGH PERFORMANCE

The ambitious purpose of Roberti's selection is to offer a nice range of outdoor furniture with a high "marine" quality and durability grade. Each material has been carefully selected before becoming part of production. All models have been manufactured for outdoor conditions in all seasons and latitudes. Roberti collections keep the unalterated features of materials while joining them with a timeless elegance. Chairs, armchairs and tables provide the perfect seafront spot to relax and watch the waves.

ALUMINUM+STAINLESS STEEL 316L

The best performing material to be used for all frames of chairs, tables, sunbeds, armchairs and sofas. Aluminum does not rust even in the extremely demanding marine use; is light enough to be moved during cleaning operations; does not overheat! Stainless steel 316L is the most suitable steel alloy for the high resistance in a saline environment
(used for the whole hardware)

COATING

High protection powder coating in the top versions (Tiger, Akzonobel, Axalta), offering no rust salt corrosion, no colour fading, no scratching. Many colours available.

ROPES

Different types of ropes assure elegance and unique beauty to the furniture. Ropes are made of Polyester and Polypropylene, and have high resistance to UV rays fading. They have flame retardant classification.

SUNWEAVE / SUNROPE

Sunweave is made of Polyethylene and sunrope is made of polyesther / pvc. They are flame retardant (IMO tested) and have high resistance to UV rays fading. Robust and resistant they do not loosen.

BATYLINE

For seating parts on chairs and sunbeds the material used will be Batyline (original Serge Ferrari collection) having the best quality for strength and durability, UV rays resistance and IMO certified FR.

OUTDOOR SUITABLE TABLE TOPS

Can be with OUTDOOR guaranteed HPL (HIGH PRESSURE LAMINATES) on heavy duty usage for bars and restaurants in the marine milieu or with HIGH MACS acrylic resin top, guaranteed scratch resistance, oil and stain repellent, solvent resistant, easy maintenance. All of them have FR certification. Many fashionable and elegant finishes available.

FABRICS

A large selection of polypropylene fabrics of italian origin with FR IMO certification is available. All fabrics have UV exposure resistance. Sunbrella fabrics are available at choice; on demand Sunbrella fabric can be treated with a FR IMO certified coating. All fabrics come with individual washing instructions.

CUSHION FOAMS

Roberti offers a special outdoor version of foams: they have sealed protection with a PVC - polyester cover making the foam completely water-repellent: this will permit a longer safe usage of the cushions. Outdoor foams can be FR IMO certified. This special Roberti outdoor foam-system assures higher comfort if compared to QDF (quick dry foam) and dries quicker as the foam will never get wet. The whole production process of cushions and foams is made in Italy.

SIZE (cm)

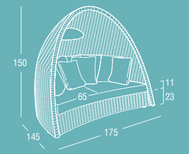
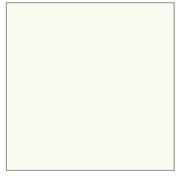
CODE 9631 KG 77



MATERIALS

FINISH

Polyester powder coating / scratch and UV resistant / high resistance to salt and rust corrosion

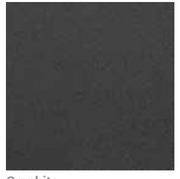


White

Cipria

Coffee

Terra



Graphite

Aluminum Ral 9006

WEAVING

Polypropylene and Polyesther rope / UV resistance / Flame retardant / weather-proof.
The different materials, like ropes, sunrope and sunweave, can be only used on given collection as specified on technical data.
Easy maintenance.
